P-100, P-100M, P-200 and DP-100 kits and units will be provided with wiring harness cables which will be color coded differently than those in the first production models. These wire color code changes are listed below by cable number. This cable identification method will be used as an alternative to the original method until all original stock has been utilized. You will note that the colored wire in a cable which goes to pin one is still the same as the original color which was assigned to that cable.
